REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art of record does not provide for, nor suggests providing for a system for caching documents by computing a maximum navigation probability field and associating this field with the particular cacheline. As stated in pages 37-38 a navigation probability represents the conditional probability that a user will request the content element contained in a specific cacheline given that he has followed a path CSL (i.e. the maximum clickstream (i.e. a clickstream is defined as a series of recorded user actions, such as clicks on hyperlinks) length that is stored for the particular user). For a set of cachelines, a maximum navigation probability of a corresponding cacheline is the maximum of all the navigation probabilities of all of the particular predecessors contained in the clickstream. Each of the predecessor navigation probabilities is computed in one of three ways:

- If the cacheline has no predecessors, then the probability is 1,
- If the cacheline has a single predecessor, then the probability is the navigation probability obtained from the Profiler (i.e. hint).
- If the cacheline has multiple predecessors, then the probability of that particular cacheline is the maximum navigation probability of all that particular cacheline's predecessors (i.e. a recursive function).

Each of the cachelines will store the MNP for the particular cacheline. Once a new insertion is completed, the MNP of all the cachelines are recalculated to

compensate for the change in the particular cache. The Profiler provides a hint 1200 to the caching system based on the rules stored in the rule warehouse. The profiler can return a hint that indicates that there is a 70% probability that the user will request N_d , given that the user has most recently requested $\langle N_a, N_b, N_c \rangle$, as shown in Figure 12. These MNP's of each and every cacheline permit the system to determine which cacheline should be replaced based on the current clickstream.

The closest prior art of record is Horvitz '565. Horvitz discloses a caching system which receives a content element insertion request, based on a currently retrieved URL, determine a set of URLs that may be accessed next, assign probabilities to these various URLs, and prefetch a plurality of URLs that have a likelihood of being accessed next (Figure 8). Horvitz does not specifically disclose that the element which is prefetched is stored with a MNP based on a clickstream history (i.e. navigation history) as described above. One of ordinary skill in the art would view this as a novel and non-obvious modification to Horvitz.

For these reasons, in conjunction with the other limitations of the independent claims, puts this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Information Disclosure Statement

2. The IDS dated January 9, 2009 has been considered. One reference was not considered because this NPL reference does not have a date with at least a year. See enclosed PTO-1449.

3. The terminal disclaimer filed on January 9, 2008 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 6,622,168 has been reviewed and is accepted. The terminal disclaimer has been recorded.
